

Dylan McGannon

Senior Software Engineer

dylan.mcgannon@gmail.com

Brief

I'm a software engineer currently based in the UK specialising in infrastructure, DevOps, observability and monitoring.

I have deep experience in web development, infrastructure and operations for large scale, high traffic deployments.

My previous roles have given me leadership experience with respect to the coordination of a delivery team utilising agile principles as well as streamlined CI/CD practices.

I have a strong interest in the linux operating system, the kubernetes platform and am highly capable in a variety of programming languages including NodeJS, rust, golang, PHP and in shells like bash and fish.

Skills, Interests and Achievements

I have a lot of experience with deploying, configuring & managing kubernetes using many various deployment methods such as kubespray & kops as well as with managed solutions from AWS, GCP, Azure & OVHCloud. I hold an active 'Certified Kubernetes Administrator' qualification from The Linux Foundation (certification id: CKA-2000-007062-0100).

I have used linux personally and professionally for over 15 years and am very comfortable working within the linux ecosystem.

In my free time I have contributed to a handful of open source projects including Gnome shell extensions, VSCode plugins, helm charts and many others.

A recent project of mine is retro.tools, an online agile retrospective tool which has gained some traction.

These and other examples of work are available on my github (github.com/d0x2f).

I'm capable in the following technologies:

- Cloud Services: AWS, GCP, Azure & OVHCloud
- Infrastructure Management: Ansible, Terraform, Helm, Kubernetes, Istio, Docker, GitLab CI & GitHub actions.
- Web: NGINX, Apache, HA Proxy & Kong.
- Languages: Rust, Golang, NodeJS, PHP, Python, C/C++ & (ba)sh.
- Databases: MySQL (+cluster), Postgres (+spilo), Amazon RDS, Google CloudSQL, Redis, ETCD, Prometheus & Elasticsearch.
- Frameworks: Kubeless, Rocket + Diesel (rust), Laravel (php), Angular, VueJS & Svelte.
- Linux: Arch, Ubuntu, CentOS & Alpine.

Visa and Residency Status

I'm an Australian citizen with the right to live and work in the UK on an Ancestry visa.

At the end of my visa period (2027) I'll be eligible to apply for indefinite leave to remain in the UK.

Education

Monash University, Melbourne, Victoria

Bachelor of Science (Mathematics Major), 2015

Griffith University, Brisbane, Queensland

Bachelor of Information Technology (Computing and Intelligent Systems Major), 2012

Employment

Encapto — encapto.com

Melbourne, AU & London, UK — Senior Software Engineer — 2015 - Present

Encapto is focused on managing large scale WiFi deployments by providing a feature rich cloud based management platform with a custom built AAA radius solution.

Large profile clients include Telstra Australia, Worldlink Nepal, JIO India and many more around the world.

When I started at Encapto the technology stack was in it's early stages, being primarily a single large AWS instance with infrequent deployments and minimal monitoring/alerting. Today it is completely transformed with multi-regional kubernetes clusters and zealous adoption of both agile and DevOps principles allowing fast paced development, cost reductions and operational stability.

Some major projects accomplished in this role:

- Transition of the platform from a static monolith to a kubernetes native distributed cluster.
- Development of a new client facing API complete with a comprehensive permissions system.
- Development of a hardware provisioning system and SMB oriented WiFi management portal as part of Telstra's "Telstra Air Merchant" product.

Encapto also provides another product named Encapto MSP (Managed Service Provider) which, in brief, is an off the shelf white-labeled solution for MSPs to provide a single interface that simplifies many complex enterprise products for their customers. It is designed to be highly extensible and scalable by utilising serverless functions, HA kubernetes and widget based ui controls.

My main focus for Encapto MSP has been acting as a lead developer and fronting delivery of a robust infrastructure pipeline, an alerting and monitoring solution and general espousal of DevOps principles and best practices for the team.

Chilli Pepper Media — chillipepper.com.au

Brisbane, AU — Software Developer — 2010 - 2012

This employer had a wide portfolio of clients which demanded a strong knowledge in, and an ability to learn, many different development environments.

Technologies and tools utilised include:

- A wide array of programming languages (PHP, JAVA, C#, Objective C among others).
- Various database solutions (MySQL, MSSQL, postgres and more).
- Multiple development environments such as Visual Studio, Eclipse (Android SDK) and X-Code (iOS SDK).

High volume mission critical e-commerce.

Mobile app development on both android and iOS platforms.
